## 24 Channel Seismic Recorder

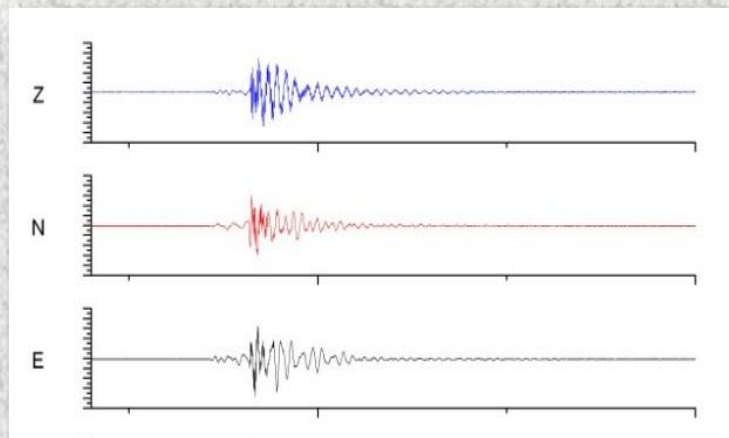

The ART-SR2424 is a multi-channel seismic recorder for reflection, refraction and exploration seismic investigations.

This device offers significant economy, stand-alone features and versatility in a rugged and easy-to-use package for field usage.

### Key Features:

- Stand-alone operation
- Easy to use
- Precise and Reliable
- Direct stream to USB flash memory
- Excellent compactness and rugged package
- Long time battery operation

### Technical specifications:

- 24-bit resolution – 16,000 sample/s/channel
- Simultaneous sampling for all channels
- Data recording up to 16 GB (USB flash memory)
- Adjustable input gains from X1 to X32
- Industrial high bright OLED display
- Continues stream or trigger recording method
- 32-bit ARM processor inside
- Raw binary output files exportable to Excel, Origin, Matlab ...
- Easy parameter setting through USB memory stick
- High current Polymer-Ion rechargeable battery
- GPS synchronization & Remote control triggering (optional)
- Parameter setting via Ethernet or USB flash memory
